## Lynxrail Wagon design

The Lynxrail wagon is a lightweight car designed to carry more bulk material per axle than its competitors and provides a fuel-efficient design that is easy to maintain. The design can be adapted for all types of bulk products and is suitable for rotary unloading as well as bottom discharge. The Lynxrail car is used successfully in iron ore transportation in the Northwest of Australia.

In 2002 the Lynxrail car was awarded a national Engineering Australia Excellence award.
